Trilithic Introduces new XFTP Division

Indianapolis, Indiana (Tuesday, February 18, 2003) Trilithic announces the formation of the new **XFTP Division**. This news was released prior to the opening of the **Cable Connects 2003** trade show in San Antonio, Texas. The purpose behind the Field Technical Products Division is to bring about a catalog of products for cable operators & technicians that are technically qualified, sold and supported by Trilithic. The XFTP Division includes the original E.A.S. staff of engineers, field application engineers, sales and customer support people.

What will this mean for you? First, this experienced staff will insure continuity of Emergency Alert products, development and support. Additionally, they will also take on the role of technically evaluating and specifying a new product line that will be wholly supported by Trilithic.

The new products include test equipment such as TDR's and Fiber Optic Power Meters, Head-End Modulators, and Processors, Optical Transmitters, Amplifiers, Digital Transmitters & Receivers as well as many other system and head-end components. The division has also signed an agreement to fully support the non-warranty repairs of this product line, therefore enhancing your purchase by prolonging the life of your product.
