New Product Release: CTL Device Controller

Indianapolis, Indiana (Monday, February 20, 2006), Trilithic's RF & Microwave Components division is pleased to release the CTL Switchable Device Controller. This low cost versatile controller is an ideal solution for test bed configurations and test module design. Featuring GPIB/IEEE-488, RS-232/RS-485 or Ethernet communication interface. The CTL provides control for Trilithic programmable attenuators, RF Switches and other switchable components. Typical applications include test and verification lab environments with single components controlled with a PC to an integrated subsystem with 64 individual programmable attenuators and 32 switches configured in a communications RF simulation system. Trilithic designs and manufactures an array of components with compatible interfaces for the CTL. We also design interfaces for other manufacturer's devices by request.
